Présentation

Prérequis

- Bachelor's Degree holder or equivalent
- 3 years of professional experience
- Proficiency in English: (TOEFL IBT 90 or IELTS: 6.5 or TOEIC 800)

Objectifs pédagogiques

Businesses regardless of their type (private, government, not-for-profit), size or financial position they all consist of three basic functions that run the business. Those three functions are operations, finance and marketing. Whether the business type is manufacturing, retail, hospital or others, whether the business size is small, medium or enterprise, whether the business financial position is different they all have these three basic functions.

The 3 basics decline in : Human Ressources, Sales and Marketing, Research&Development, Production/Operations, Customer Service, Finance and Accounts, Administration and IT.

All organizations have operations that produce some mix of services and products. Operations is the set of activities dedicated to value added conversion of inputs (labour, material, energy, capital, knowledge, etc ..) into timely outputs (products and services) at competitive cost, volume and quality levels to satisfy customers demand thru the multiple interrelated processes included within the global supply chain.

Goods are something tangible (physical) which created from raw materials and parts such as motherboard that is part of the computers, as well as phone and, cars and TV.

Services are something intangible (not physical) that provide some sort of psychological value or mixture of time or location value such as education and healthcare.

There are so many examples of goods and services that surround our day to day life that remind us about operations function, every time we use the phone to call someone, read a book, or watch a video it remind us about operations function of one or more of firms.

The aim of the business is to equalize between the supply of the materials and achieving the customer demand. Having a lot of the supply consider a waste for the firm resources and having a little of the supply might lead into customer dissatisfaction.

The business through the operations function needs to manage and control the supply chains, work with sales and marketing to make sure they meet the customer demand. Although the operations function is accountable for producing goods and services, the operations function needs the help and support from other parts or function areas of the organization such as finance and marketing.

Course objectives
